

Wirtualny Dziekanat

v1.0.0

Generated by Doxygen 1.12.0

Chapter 1

Wirtualny Dziekanat

1.1 Opis projektu

Wirtualny Dziekanat to aplikacja mobilna stworzona w technologii Flutter, mająca na celu ułatwienie studentom oraz pracownikom uczelni dostępu do kluczowych funkcji administracyjnych i informacyjnych związanych z edukacją. Aplikacja zastępuje tradycyjne interakcje z dziekanatem, umożliwiając szybki dostęp do ocen, planu zajęć, harmonogramu egzaminów, e-dokumentów oraz ułatwiając komunikację z administracją uczelni.

1.2 Funkcje

- **Logowanie i autoryzacja:** Logowanie za pomocą uczelnianego adresu e-mail, hasła i odcisku palca.
- **Podgląd ocen i zaliczeń:** Możliwość przeglądania ocen z egzaminów, kolokwίων oraz innych zaliczeń.
- **Plan zajęć:** Interaktywny kalendarz z bieżącym planem zajęć.
- **Harmonogram egzaminów:** Informacje o nadchodzących egzaminach i sesjach poprawkowych.
- **Powiadomienia push:** Przypomnienia o zbliżających się egzaminach, zajęciach oraz ważnych wydarzeniach.
- **Tryb offline:** Dostęp do zapisanych wcześniej danych bez połączenia z internetem.

1.3 Technologie

- **Flutter:** Framework do tworzenia aplikacji wieloplatformowych.
- **Firestore:** Backend aplikacji, zapewniający autoryzację, bazę danych oraz powiadomienia push.
- **Provider:** Zarządzanie stanem aplikacji.
- **Doxygen:** Generowanie dokumentacji technicznej.

1.4 Instalacja

1. Sklonuj repozytorium:
`git clone https://github.com/Me-PheW/wirtualny-dziekanat-mobile`
2. Przejdź do katalogu projektu:
`cd wirtualny-dziekanat-mobile`
3. Zainstaluj zależności:
`flutter pub get`
4. Wygeneruj języki:
`flutter gen-l10n`
5. Uruchom aplikację:
`flutter run`

1.5 Licencja

Ten projekt jest licencjonowany na warunkach licencji MIT. Zobacz plik **LICENSE** aby uzyskać więcej informacji.

1.6 Bezpieczeństwo

- **Szyfrowanie:** Wszystkie dane są szyfrowane podczas przesyłania i przechowywania.
- **Prywatność:** Twoje dane są bezpieczne i nie są udostępniane osobom trzecim.

1.7 Kontakt

Jeśli masz pytania lub sugestie, skontaktuj się z nami.

1.8 Autorzy

- Marcin Dudek
- Mateusz Basiaga

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

_ \$Announcement	??
_ \$AnnouncementsResponse	??
_ \$Classroom	??
_ \$CourseOfStudy	??
_ \$ErrorsResponse	??
_ \$Faculty	??
_ \$FacultyAddress	??
_ \$Lecture	??
_ \$Lecturer	??
_ \$LecturerAddress	??
_ \$MessageResponse	??
_ \$PhoneNumber	??
_ \$ProfilePicture	??
_ \$Schedule	??
_ \$Student	??
_ \$StudentLoginResponse	??
_ \$StudentLoginWithUsernameAndPasswordData	??
_ \$StudentProfilePictureUpdatedResponse	??
_ \$WeekPartTimeSchedule	??
_ AnnouncementsPageState	
Stan dla klasy AnnouncementsPage	??
AnnouncementsPage	
Klasa dostarczająca stronę ogłoszeń	??
BiometricsNotifier	
Notifier dla biometrii	??
ConsumerStatefulWidget	??
ConsumerWidget	??
CustomInputBorders	??
DarkModeNotifier	
Notifier dla trybu ciemnego	??
DefaultFirebaseOptions	??
Exam	??
Exception	??
FirebaseApi	??
ImagePickerService	??

LocaleNotifier	
Notifier dla języka	??
MyApp	
Główna klasa aplikacji	??
NotificationsNotifier	
Notifier dla powiadomień	??
SandBox	
Klasa do testowania	??
SelectedLanguageNotifier	
Notifier dla wybranego języka	??
StatefulWidget	??
StatelessWidget	??
StateNotifier< bool >	??
StateNotifier< Locale >	??
StateNotifier< String >	??
StateNotifier< Student?>	??
StudentNotifier	
Notifier dla stanu studenta	??
Subject	??
WirtualnyAuth	??
WirtualnyHttpClient	??
WirtualnyNotifications	??
WirtualnySdk	??
WirtualnySdkConfig	??

Chapter 3

File Index

3.1 File List

Here is a list of all files with brief descriptions:

git_hooks/commit_msg.dart	??
git_hooks/pre_commit.dart	??
lib/main.dart	
Główny plik	??
lib/providers/auth_state_provider.dart	
Plik dostarczający providera stanu autoryzacji	??
lib/providers/riverpod_provider.dart	
Plik dostarczający providerów Riverpod	??
lib/screens/announcements/announcement_details_page.dart	??
lib/screens/announcements/announcements_page.dart	
Plik dostarczający stronę ogłoszeń	??
lib/screens/home/home_page.dart	
Ekran główny wyświetlający plan zajęć studenta	??
lib/screens/profile/profile_page.dart	
Ekran profilu użytkownika z możliwością edycji danych	??
lib/screens/profile/profile_page_data_row.dart	
Widget wyświetlający wiersz danych na stronie profilu	??
lib/screens/settings/settings_page.dart	
Ekran ustawień użytkownika	??
lib/screens/subjects/subject.dart	
Definicje klas reprezentujących przedmioty, oceny i egzaminy	??
lib/screens/subjects/subject_page.dart	
Ekran wyświetlający przedmioty i oceny studenta	??
lib/screens/tabs/tabs_screen.dart	
Ekran z zakładkami nawigacyjnymi aplikacji	??
lib/screens/welcome/student_login.dart	
Formularz logowania dla studentów	??
lib/screens/welcome/welcome_page.dart	
Ekran powitalny aplikacji z formularzem logowania	??
lib/utils/biometrics.dart	
Obsługa uwierzytelniania biometrycznego	??
lib/utils/common.dart	
Funkcje pomocnicze używane w aplikacji	??
lib/utils/firebase_options.dart	??
lib/utils/image_picker_service.dart	
Usługa do wybierania obrazów z galerii lub aparatu	??

lib/utils/ push_notifications.dart	
Obsługa powiadomień push za pomocą Firebase	??
lib/utils/ theme.dart	
Definicje motywów aplikacji oraz niestandardowych obramowań pól tekstowych	??
lib/widgets/ message_handler.dart	??
lib/widgets/shared/ haptic_switch.dart	
Przełącznik z haptycznym sprzężeniem zwrotnym	??
lib/widgets/shared/ password_input.dart	
Widget pola tekstowego do wprowadzania hasła z możliwością pokazania/ukrycia hasła	??
lib/widgets/shared/ styled_button.dart	
Definicje stylizowanych przycisków używanych w aplikacji	??
lib/widgets/shared/ styled_form_field.dart	
Stylizowane pole formularza używane w aplikacji	??
lib/widgets/shared/ styled_text.dart	
Stylizowane teksty używane w aplikacji	??
lib/widgets/shared/ styled_widgets.dart	
Stylizowane widżety używane w aplikacji	??
lib/wirtualny-sdk/ wirtualny_http_client.dart	??
lib/wirtualny-sdk/ wirtualny_sdk.dart	??
lib/wirtualny-sdk/ wirtualny_sdk_config.dart	??

Chapter 4

Class Documentation

4.1 `_$Announcement` Class Reference

Private Member Functions

- const factory `Announcement` ({ @JsonKey(name:"id") required int id, @JsonKey(name:"isBroadcast") required bool isBroadcast, @JsonKey(name:"subject") required String `subject`, @JsonKey(name:"content_html") required String contentHtml, @JsonKey(name:"priority") required String priority, @JsonKey(name:"updatedAt") required DateTime updatedAt, @JsonKey(name:"createdAt") required DateTime createdAt, })
- factory `Announcement fromJson` (Map< String, dynamic > json)

4.1.1 Member Function Documentation

4.1.1.1 `Announcement()`

```
const factory _$Announcement::Announcement (  
    { @JsonKey(name:"id") required int id, @JsonKey(name:"isBroadcast") required bool  
    isBroadcast, @JsonKey(name:"subject") required String subject, @JsonKey(name:"content_html")  
    required String contentHtml, @JsonKey(name:"priority") required String priority, @JsonKey(name:  
    : "updatedAt") required DateTime updatedAt, @JsonKey(name:"createdAt") required DateTime created←  
    At, } ) [private]
```

4.1.1.2 `fromJson()`

```
factory Announcement _$Announcement::fromJson (  
    Map< String, dynamic > json) [private]
```

The documentation for this class was generated from the following file:

- lib/wirtualny-sdk/models/announcemnet/`announcement.dart`

4.2 _\$AnnouncementsResponse Class Reference

Private Member Functions

- const factory [AnnouncementsResponse](#) ({ @JsonKey(name:"docs") required List< Announcement > docs, @JsonKey(name:"hasNextPage") required bool? hasNextPage, @JsonKey(name:"hasPrevPage") required bool? hasPrevPage, @JsonKey(name:"limit") required int? limit, @JsonKey(name:"nextPage") required int? nextPage, @JsonKey(name:"page") required int? page, @JsonKey(name:"pagingCounter") required int? pagingCounter, @JsonKey(name:"prevPage") required int? prevPage, @JsonKey(name:"totalDocs") required int? totalDocs, @JsonKey(name:"totalPages") required int? totalPages, })
- factory [AnnouncementsResponse fromJson](#) (Map< String, dynamic > json)

4.2.1 Member Function Documentation

4.2.1.1 AnnouncementsResponse()

```
const factory _$AnnouncementsResponse::AnnouncementsResponse (
    { @JsonKey(name:"docs") required List< Announcement > docs, @JsonKey(name:"hasNextPage") required bool? hasNextPage, @JsonKey(name:"hasPrevPage") required bool? hasPrevPage, @JsonKey(name:"limit") required int? limit, @JsonKey(name:"nextPage") required int? nextPage, @JsonKey(name:"page") required int? page, @JsonKey(name:"pagingCounter") required int? pagingCounter, @JsonKey(name:"prevPage") required int? prevPage, @JsonKey(name:"totalDocs") required int? totalDocs, @JsonKey(name:"totalPages") required int? totalPages, } )
[private]
```

4.2.1.2 fromJson()

```
factory AnnouncementsResponse _$AnnouncementsResponse::fromJson (
    Map< String, dynamic > json) [private]
```

The documentation for this class was generated from the following file:

- lib/wirtualny-sdk/models/responses/announcements_response/[announcements_response.dart](#)

4.3 _\$Classroom Class Reference

Private Member Functions

- const factory [Classroom](#) ({ @JsonKey(name:"id") required int id, @JsonKey(name:"faculty") required dynamic faculty, @JsonKey(name:"floorNumber") required int floorNumber, @JsonKey(name:"roomNumber") required int roomNumber, @JsonKey(name:"title") required String title, @JsonKey(name:"updatedAt") required DateTime updatedAt, @JsonKey(name:"createdAt") required DateTime createdAt, })
- factory [Classroom fromJson](#) (Map< String, dynamic > json)

4.3.1 Member Function Documentation

4.3.1.1 Classroom()

```
const factory _$Classroom::Classroom (
    { @JsonKey(name:"id") required int id, @JsonKey(name:"faculty") required dynamic
    faculty, @JsonKey(name:"floorNumber") required int floorNumber, @JsonKey(name:"roomNumber")
    required int roomNumber, @JsonKey(name:"title") required String title, @JsonKey(name:"updatedAt") required DateTime updatedAt, @JsonKey(name:"createdAt") required DateTime createdAt, } )
[private]
```

4.3.1.2 fromJson()

```
factory Classroom _$Classroom::fromJson (
    Map< String, dynamic > json) [private]
```

The documentation for this class was generated from the following file:

- lib/wirtualny-sdk/models/classroom/classroom.dart

4.4 _\$CourseOfStudy Class Reference

Private Member Functions

- const factory CourseOfStudy ({ @JsonKey(name:"id") required int id, @JsonKey(name:"fieldOfStudy") required String fieldOfStudy, @JsonKey(name:"faculty") required Faculty faculty, @JsonKey(name:"schedule") required Schedule schedule, @JsonKey(name:"courseType") required String courseType, @JsonKey(name:"levelOfStudy") required String levelOfStudy, @JsonKey(name:"obtainedTitle") required String obtainedTitle, @JsonKey(name:"numberOfSemesters") required int numberOfSemesters, @JsonKey(name:"currentSemester") required int currentSemester, @JsonKey(name:"startDate") required DateTime startDate, @JsonKey(name:"endDate") required DateTime endDate, @JsonKey(name:"updatedAt") required DateTime updatedAt, @JsonKey(name:"createdAt") required DateTime createdAt, })
- factory CourseOfStudy fromJson (Map< String, dynamic > json)

4.4.1 Member Function Documentation

4.4.1.1 CourseOfStudy()

```
const factory _$CourseOfStudy::CourseOfStudy (
    { @JsonKey(name:"id") required int id, @JsonKey(name:"fieldOfStudy") required
    String fieldOfStudy, @JsonKey(name:"faculty") required Faculty faculty, @JsonKey(name:"schedule")
    required Schedule schedule, @JsonKey(name:"courseType") required String courseType, @JsonKey(name:"levelOfStudy") required String levelOfStudy, @JsonKey(name:"obtainedTitle") required
    String obtainedTitle, @JsonKey(name:"numberOfSemesters") required int numberOfSemesters, @JsonKey(name:"currentSemester") required int currentSemester, @JsonKey(name:"startDate") required
    DateTime startDate, @JsonKey(name:"endDate") required DateTime endDate, @JsonKey(name:"updatedAt") required DateTime updatedAt, @JsonKey(name:"createdAt") required DateTime createdAt, } )
[private]
```

4.4.1.2 fromJson()

```
factory CourseOfStudy _$CourseOfStudy::fromJson (
    Map< String, dynamic > json) [private]
```

The documentation for this class was generated from the following file:

- lib/wirtualny-sdk/models/course_of_study/course_of_study.dart

4.5 _\$ErrorsResponse Class Reference

Private Member Functions

- const factory [ErrorsResponse](#) ({ @JsonKey(name:"errors") required List< [Error](#) > errors, })
- factory [ErrorsResponse fromJson](#) (Map< String, dynamic > json)

4.5.1 Member Function Documentation

4.5.1.1 ErrorsResponse()

```
const factory _$ErrorsResponse::ErrorsResponse (
    { @JsonKey(name:"errors") required List< Error > errors, } ) [private]
```

4.5.1.2 fromJson()

```
factory ErrorsResponse _$ErrorsResponse::fromJson (
    Map< String, dynamic > json) [private]
```

The documentation for this class was generated from the following file:

- lib/wirtualny-sdk/models/responses/errors_response/errors_response.dart

4.6 _\$Faculty Class Reference

Private Member Functions

- const factory [Faculty](#) ({ @JsonKey(name:"id") required int id, @JsonKey(name:"name") required String name, @JsonKey(name:"classrooms") required List< Classroom > classrooms, @JsonKey(name:"coursesOfStudy") required List< CourseOfStudy > coursesOfStudy, @JsonKey(name:"address") required FacultyAddress address, @JsonKey(name:"contact") required [Contact](#) contact, @JsonKey(name:"updatedAt") required DateTime updatedAt, @JsonKey(name:"createdAt") required DateTime createdAt, })
- factory [Faculty fromJson](#) (Map< String, dynamic > json)

4.6.1 Member Function Documentation

4.6.1.1 Faculty()

```
const factory _$Faculty::Faculty (
    { @JsonKey(name:"id") required int id, @JsonKey(name:"name") required String
    name, @JsonKey(name:"classrooms") required List< Classroom > classrooms, @JsonKey(name:"coursesOfStudy") required List< CourseOfStudy > coursesOfStudy, @JsonKey(name:"address") required FacultyAddress address, @JsonKey(name:"contact") required Contact contact, @JsonKey(name:"updatedAt") required DateTime updatedAt, @JsonKey(name:"createdAt") required DateTime createdAt, } ) [private]
```

4.6.1.2 fromJson()

```
factory Faculty _$Faculty::fromJson (
    Map< String, dynamic > json) [private]
```

The documentation for this class was generated from the following file:

- [lib/wirtualny-sdk/models/faculty/faculty.dart](#)

4.7 _\$FacultyAddress Class Reference

Private Member Functions

- const factory [FacultyAddress](#) ({ @JsonKey(name:"country") required String country, @JsonKey(name:"zipCode") required String zipCode, @JsonKey(name:"city") required String city, @JsonKey(name:"street") required String street, @JsonKey(name:"buildingNumber") required String buildingNumber, })
- factory [FacultyAddress fromJson](#) (Map< String, dynamic > json)

4.7.1 Member Function Documentation

4.7.1.1 FacultyAddress()

```
const factory _$FacultyAddress::FacultyAddress (
    { @JsonKey(name:"country") required String country, @JsonKey(name:"zipCode")
    required String zipCode, @JsonKey(name:"city") required String city, @JsonKey(name:"street")
    required String street, @JsonKey(name:"buildingNumber") required String buildingNumber, } )
[private]
```

4.7.1.2 fromJson()

```
factory FacultyAddress _$FacultyAddress::fromJson (
    Map< String, dynamic > json) [private]
```

The documentation for this class was generated from the following file:

- [lib/wirtualny-sdk/models/faculty_address/faculty_address.dart](#)

4.8 _\$Lecture Class Reference

Private Member Functions

- const factory [Lecture](#) ({ @JsonKey(name:"id") required String id, @JsonKey(name:"name") required String name, @JsonKey(name:"lecturer") required Lecturer lecturer, @JsonKey(name:"form") required String form, @JsonKey(name:"startTime") required DateTime startTime, @JsonKey(name:"numberOfHours") required int numberOfHours, @JsonKey(name:"classroom") required Classroom classroom, @JsonKey(name:"isOnline") required bool isOnline, @JsonKey(name:"endTime") required DateTime endTime, })
- factory [Lecture fromJson](#) (Map< String, dynamic > json)

4.8.1 Member Function Documentation

4.8.1.1 fromJson()

```
factory Lecture _$Lecture::fromJson (
    Map< String, dynamic > json) [private]
```

4.8.1.2 Lecture()

```
const factory _$Lecture::Lecture (
    { @JsonKey(name:"id") required String id, @JsonKey(name:"name") required String
    name, @JsonKey(name:"lecturer") required Lecturer lecturer, @JsonKey(name:"form") required
    String form, @JsonKey(name:"startTime") required DateTime startTime, @JsonKey(name:"number↵
    OfHours") required int numberOfHours, @JsonKey(name:"classroom") required Classroom classroom,
    @JsonKey(name:"isOnline") required bool isOnline, @JsonKey(name:"endTime") required DateTime
    endTime, } ) [private]
```

The documentation for this class was generated from the following file:

- lib/wirtualny-sdk/models/lecture/[lecture.dart](#)

4.9 _\$Lecturer Class Reference

Private Member Functions

- const factory [Lecturer](#) ({ @JsonKey(name:"id") required int id, @JsonKey(name:"academicTitles") required List< String > academicTitles, @JsonKey(name:"firstName") required String firstName, @JsonKey(name:↵
 : "middleName") required String middleName, @JsonKey(name:"familyName") required String familyName,
 @JsonKey(name:"title") required String [title](#), @JsonKey(name:"profilePicture") required dynamic profile↵
 Picture, @JsonKey(name:"address") required LecturerAddress address, @JsonKey(name:"phoneNumber")
 required String phoneNumber, @JsonKey(name:"email") required String email, @JsonKey(name:"updated↵
 At") required DateTime updatedAt, @JsonKey(name:"createdAt") required DateTime createdAt, })
- factory [Lecturer fromJson](#) (Map< String, dynamic > json)

4.9.1 Member Function Documentation

4.9.1.1 fromJson()

```
factory Lecturer _$Lecturer::fromJson (
    Map< String, dynamic > json) [private]
```

4.9.1.2 Lecturer()

```
const factory _$Lecturer::Lecturer (
  { @JsonKey(name:"id") required int id, @JsonKey(name:"academicTitles") required
  List< String > academicTitles, @JsonKey(name:"firstName") required String firstName, @Json↵
  Key(name:"middleName") required String middleName, @JsonKey(name:"familyName") required String
  familyName, @JsonKey(name:"title") required String title, @JsonKey(name:"profilePicture")
  required dynamic profilePicture, @JsonKey(name:"address") required LecturerAddress address,
  @JsonKey(name:"phoneNumber") required String phoneNumber, @JsonKey(name:"email") required
  String email, @JsonKey(name:"updatedAt") required DateTime updatedAt, @JsonKey(name:"created↵
  At") required DateTime createdAt, } ) [private]
```

The documentation for this class was generated from the following file:

- [lib/wirtualny-sdk/models/lecturer/lecturer.dart](#)

4.10 _\$LecturerAddress Class Reference

Private Member Functions

- const factory [LecturerAddress](#) ({ @JsonKey(name:"street") required String street, @JsonKey(name:"city") required String city, @JsonKey(name:"zipCode") required String zipCode, })
- factory [LecturerAddress fromJson](#) (Map< String, dynamic > json)

4.10.1 Member Function Documentation

4.10.1.1 fromJson()

```
factory LecturerAddress _$LecturerAddress::fromJson (
  Map< String, dynamic > json) [private]
```

4.10.1.2 LecturerAddress()

```
const factory _$LecturerAddress::LecturerAddress (
  { @JsonKey(name:"street") required String street, @JsonKey(name:"city") required
  String city, @JsonKey(name:"zipCode") required String zipCode, } ) [private]
```

The documentation for this class was generated from the following file:

- [lib/wirtualny-sdk/models/lecturer_address/lecturer_address.dart](#)

4.11 _\$MessageResponse Class Reference

Private Member Functions

- const factory [MessageResponse](#) ({ @JsonKey(name:"message") required String errors, @JsonKey(name:↵
 : "status") required int status, })
- factory [MessageResponse fromJson](#) (Map< String, dynamic > json)

4.11.1 Member Function Documentation

4.11.1.1 fromJson()

```
factory MessageResponse _$MessageResponse::fromJson (  
    Map< String, dynamic > json) [private]
```

4.11.1.2 MessageResponse()

```
const factory _$MessageResponse::MessageResponse (  
    { @JsonKey(name:"message") required String errors, @JsonKey(name:"status") required  
    int status, } ) [private]
```

The documentation for this class was generated from the following file:

- [lib/wirtualny-sdk/models/responses/message_response/message_response.dart](#)

4.12 [_PhoneNumber](#) Class Reference

Private Member Functions

- const factory [PhoneNumber](#) ({ @JsonKey(name:"id") required String id, @JsonKey(name:"phoneNumber") required String phoneNumber, @JsonKey(name:"info") String? info, })
- factory [PhoneNumber](#) fromJson (Map< String, dynamic > json)

4.12.1 Member Function Documentation

4.12.1.1 fromJson()

```
factory PhoneNumber _$PhoneNumber::fromJson (  
    Map< String, dynamic > json) [private]
```

4.12.1.2 PhoneNumber()

```
const factory _$PhoneNumber::PhoneNumber (  
    { @JsonKey(name:"id") required String id, @JsonKey(name:"phoneNumber") required  
    String phoneNumber, @JsonKey(name:"info") String? info, } ) [private]
```

The documentation for this class was generated from the following file:

- [lib/wirtualny-sdk/models/contact/contact.dart](#)

4.13 _\$ProfilePicture Class Reference

Private Member Functions

- const factory [ProfilePicture](#) ({ @JsonKey(name:"id") required int id, @JsonKey(name:"updatedAt") required DateTime updatedAt, @JsonKey(name:"createdAt") required DateTime createdAt, @JsonKey(name:"url") required String url, @JsonKey(name:"thumbnailURL") String? thumbnailUrl, @JsonKey(name:"filename") required String filename, @JsonKey(name:"mimeType") required String mimeType, @JsonKey(name:"filesize") required int filesize, @JsonKey(name:"width") required int width, @JsonKey(name:"height") required int height, @JsonKey(name:"focalX") required int focalX, @JsonKey(name:"focalY") required int focalY, })
- factory [ProfilePicture fromJson](#) (Map< String, dynamic > json)

4.13.1 Member Function Documentation

4.13.1.1 fromJson()

```
factory ProfilePicture _$ProfilePicture::fromJson (
    Map< String, dynamic > json) [private]
```

4.13.1.2 ProfilePicture()

```
const factory _$ProfilePicture::ProfilePicture (
    { @JsonKey(name:"id") required int id, @JsonKey(name:"updatedAt") required DateTime updatedAt, @JsonKey(name:"createdAt") required DateTime createdAt, @JsonKey(name:"url") required String url, @JsonKey(name:"thumbnailURL") String? thumbnailUrl, @JsonKey(name:"filename") required String filename, @JsonKey(name:"mimeType") required String mimeType, @JsonKey(name:"filesize") required int filesize, @JsonKey(name:"width") required int width, @JsonKey(name:"height") required int height, @JsonKey(name:"focalX") required int focalX, @JsonKey(name:"focalY") required int focalY, } ) [private]
```

The documentation for this class was generated from the following file:

- lib/wirtualny-sdk/models/profilePicture/[profile_picture.dart](#)

4.14 _\$Schedule Class Reference

Private Member Functions

- const factory [Schedule](#) ({ @JsonKey(name:"id") required int id, @JsonKey(name:"weekAfullTimeSchedule") required [WeekFullTimeSchedule](#) weekAfullTimeSchedule, @JsonKey(name:"weekAPartTimeSchedule") required [WeekPartTimeSchedule](#) weekAPartTimeSchedule, @JsonKey(name:"weekBfullTimeSchedule") required [WeekFullTimeSchedule](#) weekBfullTimeSchedule, @JsonKey(name:"weekBPartTimeSchedule") required [WeekPartTimeSchedule](#) weekBPartTimeSchedule, @JsonKey(name:"updatedAt") required DateTime updatedAt, @JsonKey(name:"createdAt") required DateTime createdAt, })
- factory [Schedule fromJson](#) (Map< String, dynamic > json)

4.14.1 Member Function Documentation

4.14.1.1 fromJson()

```
factory Schedule _$Schedule::fromJson (
    Map< String, dynamic > json) [private]
```

4.14.1.2 Schedule()

```
const factory _$Schedule::Schedule (
    { @JsonKey(name:"id") required int id, @JsonKey(name:"weekAfullTimeSchedule")
required WeekFullTimeSchedule weekAfullTimeSchedule, @JsonKey(name:"weekAPartTimeSchedule")
required WeekPartTimeSchedule weekAPartTimeSchedule, @JsonKey(name:"weekBfullTimeSchedule")

4.24 ConsumerWidget Class Reference

Collaboration diagram for ConsumerWidget:

Private Member Functions

- const [MyApp](#) ({super.key})
- override Widget [build](#) (BuildContext context, WidgetRef ref)
Buduje widget aplikacji.
- const [AnnouncementDetailsPage](#) ({super.key, required this.announcement})
- void [_launchURL](#) (Uri url) async
- override Widget [build](#) (BuildContext context, WidgetRef ref)
- const [SettingsPage](#) ({super.key, required this.student})
Konstruktor widgetu SettingsPage.
- Widget [_buildProfileImage](#) ()
Buduje widget wyświetlający zdjęcie profilowe.
- override Widget [build](#) (BuildContext context, WidgetRef ref)
- [GradesPage](#) ({super.key})
Konstruktor widgetu GradesPage.
- override Widget [build](#) (BuildContext context, WidgetRef ref)
- const [SubjectDetailsPage](#) ({super.key, required this.subject})
Konstruktor widgetu SubjectDetailsPage.
- override Widget [build](#) (BuildContext context, WidgetRef ref)
- Widget [_buildGradesTab](#) (bool isDarkMode)
- Widget [_buildExamsTab](#) (bool isDarkMode)
- Color [_getGradeColor](#) (double grade)
Pobiera kolor oceny na podstawie jej wartości.

Private Attributes

- final Announcement [announcement](#)
- final Student [student](#)
- final List< [Subject](#) > [subjects](#)
- final [Subject](#) [subject](#)

4.24.1 Member Function Documentation

4.24.1.1 [_buildExamsTab\(\)](#)

```
Widget ConsumerWidget::_buildExamsTab (
    bool isDarkMode) [inline], [private]
```

4.24.1.2 [_buildGradesTab\(\)](#)

```
Widget ConsumerWidget::_buildGradesTab (
    bool isDarkMode) [inline], [private]
```

4.24.1.3 [_buildProfileImage\(\)](#)

```
Widget ConsumerWidget::_buildProfileImage () [inline], [private]
```

Buduje widget wyświetlający zdjęcie profilowe.

Returns

Widget wyświetlający zdjęcie profilowe.

4.24.1.4 `_getGradeColor()`

```
Color ConsumerWidget::_getGradeColor (
    double grade) [inline], [private]
```

Pobiera kolor oceny na podstawie jej wartości.

Parameters

<i>grade</i>	Wartość oceny.
--------------	----------------

Returns

Kolor odpowiadający ocenie.

4.24.1.5 `_launchURL()`

```
void ConsumerWidget::_launchURL (
    Uri url) [inline], [private]
```

4.24.1.6 `AnnouncementDetailsPage()`

```
const ConsumerWidget::AnnouncementDetailsPage (
    {super.key, required this.announcement} ) [private]
```

4.24.1.7 `build()` [1/5]

```
override Widget ConsumerWidget::build (
    BuildContext context,
    WidgetRef ref) [inline], [private]
```

Buduje widget aplikacji.

Parameters

<i>context</i>	Kontekst budowania widgetu
<i>ref</i>	Referencja do providerów Riverpod

Returns

Widget aplikacji

4.24.1.8 `build()` [2/5]

```
override Widget ConsumerWidget::build (
    BuildContext context,
    WidgetRef ref) [inline], [private]
```

4.24.1.9 build() [3/5]

```
override Widget ConsumerWidget::build (
    BuildContext context,
    WidgetRef ref) [inline], [private]
```

4.24.1.10 build() [4/5]

```
override Widget ConsumerWidget::build (
    BuildContext context,
    WidgetRef ref) [inline], [private]
```

4.24.1.11 build() [5/5]

```
override Widget ConsumerWidget::build (
    BuildContext context,
    WidgetRef ref) [inline], [private]
```

4.24.1.12 GradesPage()

```
ConsumerWidget::GradesPage (
    {super.key} ) [private]
```

Konstruktor widgetu GradesPage.

4.24.1.13 MyApp()

```
const ConsumerWidget::MyApp (
    {super.key} ) [private]
```

4.24.1.14 SettingsPage()

```
const ConsumerWidget::SettingsPage (
    {super.key, required this.student} ) [private]
```

Konstruktor widgetu SettingsPage.

Parameters

<i>student</i>	Obiekt studenta zawierający dane do wyświetlenia.
----------------	---

4.24.1.15 SubjectDetailsPage()

```
const ConsumerWidget::SubjectDetailsPage (
    {super.key, required this.subject} ) [private]
```

Konstruktor widgetu SubjectDetailsPage.

Parameters

<code>subject</code>	Obiekt przedmiotu zawierający dane do wyświetlenia.
----------------------	---

4.24.2 Member Data Documentation

4.24.2.1 announcement

```
final Announcement ConsumerWidget::announcement [private]
```

4.24.2.2 student

```
final Student ConsumerWidget::student [private]
```

4.24.2.3 subject

```
final Subject ConsumerWidget::subject [private]
```

4.24.2.4 subjects

```
final List<Subject> ConsumerWidget::subjects [private]
```

The documentation for this class was generated from the following files:

4.25 CustomInputBorder Class Reference

Static Private Member Functions

- static OutlineInputBorder `errorBorder` ()
Zwraca obramowanie pola tekstowego dla błędów.
- static OutlineInputBorder `enabledBorder` ()
Zwraca obramowanie pola tekstowego dla trybu ciemnego, gdy pole jest aktywne.
- static OutlineInputBorder `focusedBorder` ()
Zwraca obramowanie pola tekstowego dla trybu ciemnego, gdy pole jest w fokusie.
- static OutlineInputBorder `enabledBorderW` ()
Zwraca obramowanie pola tekstowego dla trybu jasnego, gdy pole jest aktywne.
- static OutlineInputBorder `focusedBorderW` ()
Zwraca obramowanie pola tekstowego dla trybu jasnego, gdy pole jest w fokusie.

4.25.1 Member Function Documentation

4.25.1.1 `enabledBorder()`

```
static OutlineInputBorder CustomInputBorders::enabledBorder () [inline], [static], [private]
```

Zwraca obramowanie pola tekstowego dla trybu ciemnego, gdy pole jest aktywne.

Returns

Obramowanie pola tekstowego.

4.25.1.2 `enabledBorderW()`

```
static OutlineInputBorder CustomInputBorders::enabledBorderW () [inline], [static], [private]
```

Zwraca obramowanie pola tekstowego dla trybu jasnego, gdy pole jest aktywne.

Returns

Obramowanie pola tekstowego.

4.25.1.3 `errorBorder()`

```
static OutlineInputBorder CustomInputBorders::errorBorder () [inline], [static], [private]
```

Zwraca obramowanie pola tekstowego dla błędów.

Returns

Obramowanie pola tekstowego.

4.25.1.4 `focusedBorder()`

```
static OutlineInputBorder CustomInputBorders::focusedBorder () [inline], [static], [private]
```

Zwraca obramowanie pola tekstowego dla trybu ciemnego, gdy pole jest w fokusie.

Returns

Obramowanie pola tekstowego.

4.25.1.5 focusedBorderW()

```
static OutlineInputBorder CustomInputBorders::focusedBorderW () [inline], [static], [private]
```

Zwraca obramowanie pola tekstowego dla trybu jasnego, gdy pole jest w fokusie.

Returns

Obramowanie pola tekstowego.

The documentation for this class was generated from the following file:

4.27 DefaultFirebaseOptions Class Reference

Static Private Attributes

- static FirebaseOptions get [currentPlatform](#)
- static const FirebaseOptions [ios](#)

4.27.1 Detailed Description

Default [FirebaseOptions] for use with your Firebase apps.

Example:

```
import 'firebase_options.dart';  
// ...  
await Firebase.initializeApp(  
  options: DefaultFirebaseOptions.currentPlatform,  
);
```

4.27.2 Member Data Documentation

4.27.2.1 currentPlatform

```
FirebaseOptions get DefaultFirebaseOptions::currentPlatform [static], [private]
```

4.27.2.2 ios

```
const FirebaseOptions DefaultFirebaseOptions::ios [static], [private]
```

Initial value:

```
= FirebaseOptions(
  apiKey: 'AIzaSyCWn-_Qkdgeuss28cidAWHe2-BPf07t-Jk',
  appId: '1:87204848812:ios:4ecaa3e0f37038f79a2b09',
  messagingSenderId: '87204848812',
  projectId: 'wirtualny-dziekanat-72543',
  storageBucket: 'wirtualny-dziekanat-72543.appspot.com',
  iosBundleId: 'com.example.flutterApplication',
)
```

4.28 Exam Class Reference

Private Member Functions

- [Exam](#) ({ required this.title, required this.date, required this.description, required this.location, })
Konstruktor klasy [Exam](#).

Private Attributes

- final String [title](#)
- final DateTime [date](#)
- final String [description](#)
- final String [location](#)

4.28.1 Constructor & Destructor Documentation

4.28.1.1 Exam()

```
Exam::Exam (
    { required this.title, required this.date, required this.description, required
this.location, } ) [private]
```

Konstruktor klasy [Exam](#).

Parameters

<i>title</i>	Tytuł egzaminu.
<i>date</i>	Data egzaminu.
<i>description</i>	Opis egzaminu.
<i>location</i>	Lokalizacja egzaminu.

4.28.2 Member Data Documentation

4.28.2.1 date

```
final DateTime Exam::date [private]
```

4.28.2.2 description

```
final String Exam::description [private]
```

4.28.2.3 location

```
final String Exam::location [private]
```

4.28.2.4 title

```
final String Exam::title [private]
```

4.30 FirebaseApi Class Reference

Static Private Member Functions

- static Future< void > [initNotifications](#) () async
Inicjalizuje powiadomienia push.
- static void [handleMessage](#) (RemoteMessage? message)
Obsługuje wiadomość push.
- static Future [initPushNotifications](#) () async
Inicjalizuje powiadomienia push.

Static Private Attributes

- static final [_firebaseMessaging](#) = FirebaseMessaging.instance

4.30.1 Member Function Documentation

4.30.1.1 handleMessage()

```
static void FirebaseApi::handleMessage (
    RemoteMessage? message) [inline], [static], [private]
```

Obsługuje wiadomość push.

Parameters

<code>message</code>	Wiadomość push.
----------------------	-----------------

4.30.1.2 initNotifications()

```
static Future< void > FirebaseApi::initNotifications () [inline], [static], [private]
```

Inicjalizuje powiadomienia push.

4.30.1.3 initPushNotifications()

```
static Future FirebaseApi::initPushNotifications () [inline], [static], [private]
```

Inicjalizuje powiadomienia push.

4.30.2 Member Data Documentation**4.30.2.1 _firebaseMessaging**

```
final FirebaseApi::_firebaseMessaging = FirebaseMessaging.instance [static], [private]
```

The documentation for this class was generated from the following file:

- [lib/Utils/push_notifications.dart](#)

4.31 ImagePickerService Class Reference**Static Private Member Functions**

- static Future< File?> [pickImageFromGallery](#) (BuildContext context) async
Wybiera obraz z galerii.
- static Future< File?> [pickImageFromCamera](#) (BuildContext context) async
Wybiera obraz z aparatu.
- static void [showImageSourceActionSheet](#) (BuildContext context, [Function](#)(File?) onImageSelected)
Wyświetla arkusz akcji do wyboru źródła obrazu.

4.31.1 Member Function Documentation**4.31.1.1 pickImageFromCamera()**

```
static Future< File?> ImagePickerService::pickImageFromCamera (
    BuildContext context) [inline], [static], [private]
```

Wybiera obraz z aparatu.

Parameters

<i>context</i>	Kontekst aplikacji.
----------------	---------------------

Returns

Plik obrazu lub null, jeśli nie wybrano obrazu.

4.31.1.2 pickImageFromGallery()

```
static Future< File?> ImagePickerService::pickImageFromGallery (  
    BuildContext context) [inline], [static], [private]
```

Wybiera obraz z galerii.

Parameters

<i>context</i>	Kontekst aplikacji.
----------------	---------------------

Returns

Plik obrazu lub null, jeśli nie wybrano obrazu.

4.31.1.3 showImageSourceActionSheet()

```
static void ImagePickerService::showImageSourceActionSheet (  
    BuildContext context,  
    Function(File?) onImageSelected) [inline], [static], [private]
```

Wyświetla arkusz akcji do wyboru źródła obrazu.

Parameters

<i>context</i>	Kontekst aplikacji.
<i>onImageSelected</i>	Funkcja wywoływana po wybraniu obrazu.

```
override State< StatefulWidget > StatefulWidget::createState () [private]
```

4.37.1.9 HomePage()

```
StatefulWidget::HomePage (
    {super.key, required this.student} ) [private]
```

Konstruktor widgetu HomePage.

Parameters

<i>student</i>	Student, którego plan zajęć będzie wyświetlany.
----------------	---

4.37.1.10 MessageHandler()

```
const StatefulWidget::MessageHandler (  
    {super.key, required this.child} ) [private]
```

4.37.1.11 PasswordInput()

```
const StatefulWidget::PasswordInput (  
    { super.key, required this.textEditingController, required this.validator, required  
    this.label, required this.icon, } ) [private]
```

Konstruktor widgetu PasswordInput.

Parameters

<i>textEditingController</i>	Kontroler tekstu dla pola hasła.
<i>validator</i>	Funkcja walidująca dla pola hasła.
<i>label</i>	Etykieta pola hasła.
<i>icon</i>	Ikona dla pola hasła.

4.37.1.12 StudentLoginForm()

```
const StatefulWidget::StudentLoginForm (  
    {super.key} ) [private]
```

4.37.1.13 TabsScreen()

```
const StatefulWidget::TabsScreen (  
    {super.key, required this.student} ) [private]
```

Konstruktor widgetu TabsScreen.

Parameters

<i>student</i>	Obiekt studenta zawierający dane do wyświetlenia.
----------------	---

4.37.1.14 WelcomeScreen()

```
const StatefulWidget::WelcomeScreen (  
    {super.key} ) [private]
```

4.37.2 Member Data Documentation

4.37.2.1 child

```
final Widget StatefulWidget::child [private]
```

4.37.2.2 icon

```
final IconData StatefulWidget::icon [private]
```

4.37.2.3 label

```
final Widget StatefulWidget::label [private]
```

4.37.2.4 student [1/2]

```
Student StatefulWidget::student [private]
```

4.37.2.5 student [2/2]

```
final Student StatefulWidget::student [private]
```

4.37.2.6 textEditingController

```
final TextEditingController StatefulWidget::textEditingController [private]
```

4.37.2.7 validator

```
final FormFieldValidator<String?> StatefulWidget::validator [private]
```

```

4.38.1.12 build() [12/12]

```
override Widget StatelessWidget::build (  
    BuildContext context) [inline], [private]
```

4.38.1.13 EditItem()

```
const StatelessWidget::EditItem (  
    {super.key, required this.widget, required this.title} ) [private]
```

Konstruktor widgetu EditItem.

Parameters

<i>widget</i>	Widget wyświetlany po prawej stronie.
<i>title</i>	Tytuł ustawienia.

4.38.1.14 Function() [1/4]

```
final void StatelessWidget::Function () [private]
```

4.38.1.15 Function() [2/4]

```
final StatelessWidget::Function () [private]
```

4.38.1.16 Function() [3/4]

```
final StatelessWidget::Function () [private]
```

4.38.1.17 Function() [4/4]

```
final StatelessWidget::Function (
    bool ) [private]
```

4.38.1.18 HapticSwitch()

```
const StatelessWidget::HapticSwitch (
    { super.key, required this.value, required this.onChanged, } ) [private]
```

Konstruktor widgetu HapticSwitch.

Parameters

<i>value</i>	Aktualna wartość przełącznika.
<i>onChanged</i>	Funkcja wywoływana po zmianie wartości przełącznika.

4.38.1.19 ProfilePageDataRow()

```
const StatelessWidget::ProfilePageDataRow (
    {super.key, required this.textLeft, required this.textRight} ) [private]
```

Konstruktor widgetu ProfilePageDataRow.

Parameters

<i>textLeft</i>	Tekst wyświetlany po lewej stronie.
<i>textRight</i>	Tekst wyświetlany po prawej stronie.

4.38.1.20 ProfileTextRight()

```
const StatelessWidget::ProfileTextRight (
    this. text,
    {super.key} ) [private]
```

Konstruktor widgetu ProfileTextRight.

Parameters

<i>text</i>	Tekst do wyświetlenia.
-------------	------------------------

4.38.1.21 SettingItem()

```
const StatelessWidget::SettingItem (  
    {super.key, required this.title, required this.bgColor, required this.iconColor,  
    required this.icon, required this.onTap, this.value} ) [private]
```

Konstruktor widgetu SettingItem.

Parameters

<i>title</i>	Tytuł ustawienia.
<i>value</i>	Wartość ustawienia.
<i>bgColor</i>	Kolor tła ikony.
<i>iconColor</i>	Kolor ikony.
<i>icon</i>	Ikona ustawienia.
<i>onTap</i>	Funkcja wywoływana po naciśnięciu ustawienia.

4.38.1.22 SettingsHeading()

```
const StatelessWidget::SettingsHeading (  
    this. text,  
    {super.key} ) [private]
```

Konstruktor widgetu SettingsHeading.

Parameters

<i>text</i>	Tekst do wyświetlenia.
-------------	------------------------

4.38.1.23 SettingsTextInside()

```
const StatelessWidget::SettingsTextInside (  
    this. text,  
    {super.key} ) [private]
```

Konstruktor widgetu SettingsTextInside.

Parameters

<i>text</i>	Tekst do wyświetlenia.
-------------	------------------------

4.38.1.24 StyledAppBarText()

```
const StatelessWidget::StyledAppBarText (  
    this. text,  
    {super.key} ) [private]
```

Konstruktor widgetu StyledAppBarText.

Parameters

<i>text</i>	Tekst do wyświetlenia.
-------------	------------------------

4.38.1.25 StyledBodyText()

```
const StatelessWidget::StyledBodyText (
    this.  text,
    {super.key} ) [private]
```

Konstruktor widgetu `StyledBodyText`.

Parameters

<i>text</i>	Tekst do wyświetlenia.
-------------	------------------------

4.38.1.26 StyledButton()

```
const StatelessWidget::StyledButton (
    {super.key, required this.onPressed, required this.child} ) [private]
```

Konstruktor widgetu `StyledButton`.

Parameters

<i>onPressed</i>	Funkcja wywoływana po naciśnięciu przycisku.
<i>child</i>	Widget dziecka wyświetlany wewnątrz przycisku.

4.38.1.27 StyledButtonSettings()

```
const StatelessWidget::StyledButtonSettings (
    {super.key, required this.onTap} ) [private]
```

Konstruktor widgetu `StyledButtonSettings`.

Parameters

<i>onTap</i>	Funkcja wywoływana po naciśnięciu przycisku.
--------------	--

4.38.1.28 StyledFormField()

```
const StatelessWidget::StyledFormField (
    { super.key, required this.textEditingController, required this.validator, required
    this.label, required this.icon, this.obscureText=false, this.suffixIcon, this.keyboardType,
    this.autofillHints, } ) [private]
```

Konstruktor widgetu `StyledFormField`.

Parameters

<i>textEditingController</i>	Kontroler tekstu dla pola formularza.
<i>validator</i>	Funkcja walidująca dla pola formularza.
<i>label</i>	Etykieta pola formularza.
<i>icon</i>	Ikona dla pola formularza.
<i>obscureText</i>	Flaga określająca, czy tekst ma być ukryty.
<i>suffixIcon</i>	Ikona wyświetlana po prawej stronie pola formularza.
<i>keyboardType</i>	Typ klawiatury dla pola formularza.
<i>autofillHints</i>	Wskazówki do automatycznego wypełniania.

4.38.2 Member Data Documentation

4.38.2.1 autofillHints

```
final Iterable<String> StatelessWidget::autofillHints [private]
```

4.38.2.2 bgColor

```

4.39 StateNotifier< bool > Class Reference

Private Member Functions

- [DarkModeNotifier](#) ()
- Future< void > [_loadDarkMode](#) () async
Ładuje stan trybu ciemnego z pamięci.
- Future< void > [toggleDarkMode](#) (bool isDarkMode) async
Przełącza tryb ciemny.
- [NotificationsNotifier](#) ()
- Future< void > [_loadNotificationState](#) () async
Ładuje stan powiadomień z pamięci.
- Future< void > [toggleNotifications](#) (bool enabled) async
Przełącza stan powiadomień
- [BiometricsNotifier](#) ()
- Future< void > [_loadSavedPreference](#) () async
Ładuje stan biometrii z pamięci.
- void [toggleBiometrics](#) (bool value)
Przełącza stan biometrii.

4.39.1 Member Function Documentation

4.39.1.1 _loadDarkMode()

```
Future< void > StateNotifier< bool >::_loadDarkMode () [inline], [private]
```

Ładuje stan trybu ciemnego z pamięci.

4.39.1.2 _loadNotificationState()

```
Future< void > StateNotifier< bool >::_loadNotificationState () [inline], [private]
```

Ładuje stan powiadomień z pamięci.

4.39.1.3 _loadSavedPreference()

```
Future< void > StateNotifier< bool >::_loadSavedPreference () [inline], [private]
```

Ładuje stan biometrii z pamięci.

4.39.1.4 BiometricsNotifier()

```
StateNotifier< bool >::BiometricsNotifier () [inline], [private]
```

4.39.1.5 DarkModeNotifier()

```
StateNotifier< bool >::DarkModeNotifier () [inline], [private]
```

4.39.1.6 NotificationsNotifier()

```
StateNotifier< bool >::NotificationsNotifier () [inline], [private]
```

4.39.1.7 toggleBiometrics()

```
void StateNotifier< bool >::toggleBiometrics (  
    bool value) [inline], [private]
```

Przełącza stan biometrii.

Parameters

<i>value</i>	Nowy stan biometrii
--------------	---------------------

4.39.1.8 toggleDarkMode()

```
Future< void > StateNotifier< bool >::toggleDarkMode (  
    bool isDarkMode) [inline], [private]
```

Przełącza tryb ciemny.

Parameters

<i>isDarkMode</i>	Nowy stan trybu ciemnego
-------------------	--------------------------

4.39.1.9 toggleNotifications()

```
Future< void > StateNotifier< bool >::toggleNotifications (  
    bool enabled) [inline], [private]
```

Przełącza stan powiadomień

Parameters

<code>enabled</code>	Nowy stan powiadomień
----------------------	-----------------------

- [lib/providers/riverpod_provider.dart](#)

4.40 StateNotifier< Locale > Class Reference

Private Member Functions

- [LocaleNotifier](#) ()
- Future< void > [_loadSavedLocale](#) () async
Ładuje zapisany język przy starcie.
- Future< void > [changeLocale](#) (String language) async
Zmienia język aplikacji.

4.40.1 Member Function Documentation

4.40.1.1 _loadSavedLocale()

```
Future< void > StateNotifier< Locale >::_loadSavedLocale () [inline], [private]
```

Ładuje zapisany język przy starcie.

4.40.1.2 changeLocale()

```
Future< void > StateNotifier< Locale >::changeLocale (
    String language) [inline], [private]
```

Zmienia język aplikacji.

Parameters

<code>language</code>	Nowy język
-----------------------	------------

4.40.1.3 LocaleNotifier()

```
StateNotifier< Locale >::LocaleNotifier () [inline], [private]
```

The documentation for this class was generated from the following file:

- [lib/providers/riverpod_provider.dart](#)

4.41 StateNotifier< String > Class Reference

Private Member Functions

- [SelectedLanguageNotifier](#) ()
- Future< void > [_loadSavedLanguage](#) () async
Ładuje zapisany język przy starcie.
- Future< void > [setLanguage](#) (String language) async
Ustawia nowy język.

4.41.1 Member Function Documentation

4.41.1.1 _loadSavedLanguage()

```
Future< void > StateNotifier< String >::_loadSavedLanguage () [inline], [private]
```

Ładuje zapisany język przy starcie.

4.41.1.2 SelectedLanguageNotifier()

```
StateNotifier< String >::SelectedLanguageNotifier () [inline], [private]
```

4.41.1.3 setLanguage()

```
Future< void > StateNotifier< String >::setLanguage (
    String language) [inline], [private]
```

Ustawia nowy język.

Parameters

<i>language</i>	Nowy język
-----------------	------------

The documentation for this class was generated from the following file:

- lib/providers/[riverpod_provider.dart](#)

4.42 StateNotifier< Student?> Class Reference

Private Member Functions

- [StudentNotifier](#)() void [updateStudent](#) (Student student)
Aktualizuje stan studenta.

4.42.1 Member Function Documentation

4.42.1.1 updateStudent()

```
StudentNotifier() void StateNotifier< Student?>::updateStudent (
    Student student) [inline], [private]
```

Aktualizuje stan studenta.

Parameters

<code>student</code>	Nowy stan studenta
----------------------	--------------------

The documentation for this class was generated from the following file:

- [lib/providers/riverpod_provider.dart](#)

4.43 StudentNotifier Class Reference

Notifier dla stanu studenta.

4.43.1 Detailed Description

Notifier dla stanu studenta.

Zarządza stanem zalogowanego studenta.

The documentation for this class was generated from the following file:

5.3.2 Function Documentation

5.3.2.1 [build\(\)](#) [1/2]

```
override Widget build (  
    BuildContext context)
```

Buduje widget [SandBox](#).

Parameters

<i>context</i>	Kontekst budowania widgetu
----------------	----------------------------

Returns

Widget [SandBox](#)

5.3.2.2 build() [2/2]

```
override Widget SandBox::build (  
    BuildContext context,  
    WidgetRef ref)
```

Buduje widget aplikacji.

Parameters

<i>context</i>	Kontekst budowania widgetu
<i>ref</i>	Referencja do providerów Riverpod

Returns

Widget aplikacji

5.3.2.3 main()

```
void main ()
```

Główna funkcja aplikacji.

Inicjalizuje środowisko, ładuje konfigurację i uruchamia aplikację.

5.3.2.4 MyApp()

```
const SandBox::MyApp (  
    {super.key} )
```

5.3.2.5 SandBox()

```
SandBox (  
    {super.key} )
```

5.3.3 Variable Documentation

5.3.3.1 library

library

5.4 lib/providers/auth_state_provider.dart File Reference

Plik dostarczający providera stanu autoryzacji.

```
import package;
```

Include dependency graph for auth_state_provider.dart:

Variables

- [library](#)
- final [authStateProvider](#)
Provider stanu autoryzacji.

5.4.1 Detailed Description

Plik dostarczający providera stanu autoryzacji.

5.4.2 Variable Documentation

5.4.2.1 authStateProvider

```
final authStateProvider
```

Initial value:

```
= StreamProvider.autoDispose<Student?>((ref) async* {
  final Stream<Student?> studentStream =
    WirtualnySdk.instance.auth.authStateChanges().map((student) {
      if (student != null) {
        return student;
      }
      return null;
    });
  await for (final student in studentStream) {
    yield student;
  }
})
```

Provider stanu autoryzacji.

Dostarcza strumień zmian stanu autoryzacji użytkownika.

5.4.2.2 library

```
library
```

5.5 lib/providers/riverpod_provider.dart File Reference

Plik dostarczający providerów Riverpod.

```
import package;
```

Include dependency graph for riverpod_provider.dart:

Classes

- class [StateNotifier< bool >](#)
- class [StateNotifier< Locale >](#)
- class [StateNotifier< String >](#)
- class [StateNotifier< Student?>](#)

Variables

- [library](#)
- final [darkModeProvider](#)
Provider trybu ciemnego.
- class [DarkModeNotifier](#) extends `StateNotifier< bool >` [localeProvider](#)
Provider języka.
- class [LocaleNotifier](#) extends `StateNotifier< Locale >` [selectedLanguageProvider](#)
Provider wybranego języka.
- class [SelectedLanguageNotifier](#) extends `StateNotifier< String >` [notificationsEnabledProvider](#)
Provider stanu powiadomień
- class [NotificationsNotifier](#) extends `StateNotifier< bool >` [biometricsEnabledProvider](#)
Provider stanu biometrii.
- class [BiometricsNotifier](#) extends `StateNotifier< bool >` [studentProvider](#)
Provider stanu studenta.
- class [StudentNotifier](#) extends `StateNotifier< Student? >` [profileImageKeyProvider](#)
Provider klucza obrazu profilowego.
- final [profilePictureProvider](#) = `StateProvider<String?>((ref) => null)`
Provider obrazu profilowego.

5.5.2 Variable Documentation

5.5.2.1 biometricsEnabledProvider

```
class NotificationsNotifier extends StateNotifier< bool > biometricsEnabledProvider
```

Initial value:

```
=
  StateNotifierProvider<BiometricsNotifier, bool>((ref) {
    return BiometricsNotifier();
  })
```

Provider stanu biometrii.

Dostarcza stan włączenia biometrii.

5.5.2.2 darkModeProvider

```
final darkModeProvider
```

Initial value:

```
= StateNotifierProvider<DarkModeNotifier, bool>((ref) {  
    return DarkModeNotifier();  
})
```

Provider trybu ciemnego.

Dostarcza stan trybu ciemnego aplikacji.

5.5.2.3 library

```
library
```

5.5.2.4 localeProvider

```
class DarkModeNotifier extends StateNotifier< bool > localeProvider
```

Initial value:

```
= StateNotifierProvider<LocaleNotifier, Locale>((ref) {  
    return LocaleNotifier();  
})
```

Provider języka.

Dostarcza stan wybranego języka aplikacji.

5.5.2.5 notificationsEnabledProvider

```
class SelectedLanguageNotifier extends StateNotifier< String > notificationsEnabledProvider
```

Initial value:

```
=  
    StateNotifierProvider<NotificationsNotifier, bool>((ref) {  
        return NotificationsNotifier();  
    })
```

Provider stanu powiadomień

Dostarcza stan włączenia powiadomień.

5.5.2.6 profileImageKeyProvider

```
class StudentNotifier extends StateNotifier< Student?> profileImageKeyProvider
```

Initial value:

```
=  
    StateProvider.autoDispose<ValueKey>((ref) => const ValueKey(0))
```

Provider klucza obrazu profilowego.

Dostarcza klucz obrazu profilowego.

5.5.2.7 profilePictureProvider

```
final profilePictureProvider = StateProvider<String?>((ref) => null)
```

Provider obrazu profilowego.

Dostarcza URL obrazu profilowego.

5.5.2.8 selectedLanguageProvider

```
class LocaleNotifier extends StateNotifier< Locale > selectedLanguageProvider
```

Initial value:

```
=  
  StateNotifierProvider<SelectedLanguageNotifier, String>((ref) {  
    return SelectedLanguageNotifier();  
  })
```

Provider wybranego języka.

Dostarcza stan wybranego języka aplikacji.

5.5.2.9 studentProvider

```
class BiometricsNotifier extends StateNotifier< bool > studentProvider
```

Initial value:

```
= StateNotifierProvider<StudentNotifier, Student?>((ref) {  
  return StudentNotifier();  
})
```

Provider stanu studenta.

Dostarcza stan zalogowanego studenta.

5.6 lib/screens/announcements/announcement_details_page.dart File Reference

5.7.2 Function Documentation

5.7.2.1 `_buildInboxList()`

`Widget _buildInboxList ()`

Buduje listę odebranych ogłoszeń

Returns

Widget listy odebranych ogłoszeń

5.7.2.2 `_buildTrashBinList()`

`Widget _buildTrashBinList ()`

Buduje listę ogłoszeń w koszu.

Returns

Widget listy ogłoszeń w koszu

5.7.2.3 `_onRefresh()`

```
void _onRefresh ()
```

5.7.2.4 `AnnouncementsPage()`

```
const _AnnouncementsPageState::AnnouncementsPage (  
    {super.key} )
```

5.7.2.5 `build()`

```
override Widget build (  
    BuildContext context)
```

5.7.2.6 `createState()`

```
override State< AnnouncementsPage > _AnnouncementsPageState::createState ()
```

5.7.2.7 `initLastUpdate()`

```
Future< void > initLastUpdate ()
```

5.7.2.8 `initState()`

```
override void initState ()
```

5.7.2.9 `loadAnnouncements()`

```
Future< void > loadAnnouncements ()
```

Ładuje ogłoszenia.

Pobiera ogłoszenia z serwera i aktualizuje stan.

5.7.3 Variable Documentation

5.7.3.1 `_announcements`

```
_announcements = [ ]
```

5.7.3.2 `_errorFeedback`

```
String _errorFeedback
```

5.7.3.3 _isLoading

```
bool _isLoading = true
```

5.7.3.4 _lastUpdate

```
DateTime _lastUpdate
```

5.7.3.5 _refreshController

```
final RefreshController _refreshController
```

Initial value:

```
=  
  RefreshController(initialRefresh: false)
```

5.7.3.6 library

```
library
```

5.8 lib/screens/home/home_page.dart File Reference

Ekran główny wyświetlający plan zajęć studenta.

```
import package;
```

Include dependency graph for home_page.dart:

Classes

- class [StatefulWidget](#)

Functions

- Future< void > [initLastUpdate](#) () async
- override void [initState](#) ()
- void [_onDaySelected](#) (DateTime [selectedDay](#), DateTime focusedDay)
Obsługuje wybór dnia w kalendarzu.
- List< Lecture > [_getDaySchedule](#) (int weekday)
Pobiera plan zajęć na określony dzień tygodnia.
- void [_onRefresh](#) () async
- override Widget [build](#) (BuildContext context)

Variables

- [library](#)
- class HomePage extends [StatefulWidget](#) [today](#) = DateTime.now()
- DateTime [selectedDay](#)
- List< Lecture > [selectedDaySchedule](#)
- DateTime [_lastUpdate](#)
- final RefreshController [_refreshController](#)

5.8.1 Detailed Description

Ekran główny wyświetlający plan zajęć studenta.

5.8.2 Function Documentation

5.8.2.1 [_getDaySchedule\(\)](#)

```
List< Lecture > _getDaySchedule (  
    int weekday)
```

Pobiera plan zajęć na określony dzień tygodnia.

Parameters

<i>weekday</i>	Dzień tygodnia.
----------------	-----------------

Returns

Lista fów zaplanowanych na dany dzień.

5.8.2.2 _onDaySelected()

```
void _onDaySelected (  
    DateTime selectedDay,  
    DateTime focusedDay)
```

Obsługuje wybór dnia w kalendarzu.

Parameters

<i>selectedDay</i>	Wybrany dzień.
<i>focusedDay</i>	Aktualnie skupiony dzień.

5.8.2.3 _onRefresh()

```
void _onRefresh ()
```

5.8.2.4 build()

```
override Widget build (  
    BuildContext context)
```

5.8.2.5 initLastUpdate()

```
Future< void > initLastUpdate ()
```

5.8.2.6 initState()

```
override void initState ()
```

5.8.3 Variable Documentation**5.8.3.1 _lastUpdate**

```
DateTime _lastUpdate
```

5.8.3.2 `_refreshController`

```
final RefreshController _refreshController
```

Initial value:

```
=  
  RefreshController(initialRefresh: false)
```

5.8.3.3 `library`

```
library
```

5.8.3.4 `selectedDay`

```
DateTime selectedDay
```

5.8.3.5 `selectedDaySchedule`

```
List<Lecture> selectedDaySchedule
```

5.8.3.6 `today`

```
class HomePage extends StatefulWidget today = DateTime.now()
```

5.9 `lib/screens/profile/profile_page.dart` File Reference

Ekran profilu użytkownika z możliwością edycji danych.

```
import dart;
```

Include dependency graph for `profile_page.dart`:

Classes

- class [ConsumerStatefulWidget](#)

Functions

- override void [initState](#) ()
- Future< void > [_uploadImage](#) (File image) async
Przesyła nowe zdjęcie profilowe na serwer.
- Widget [_buildProfileImage](#) ()
Buduje widget wyświetlający zdjęcie profilowe.
- override Widget [build](#) (BuildContext context)

Variables

- [library](#)
- class EditAccount extends [ConsumerStatefulWidget](#) [_selectedImage](#)
- bool [_isLoading](#) = false
- late Student [_student](#)

5.9.2 Function Documentation

5.9.2.1 [_buildProfileImage\(\)](#)

Widget [_buildProfileImage](#) ()

Buduje widget wyświetlający zdjęcie profilowe.

Returns

Widget wyświetlający zdjęcie profilowe.

5.9.2.2 [_uploadImage\(\)](#)

Future< void > [_uploadImage](#) (
File image)

Przesyła nowe zdjęcie profilowe na serwer.

Parameters

<code>image</code>	Plik obrazu do przesłania.
--------------------	----------------------------

5.9.2.3 build()

```
override Widget build (
    BuildContext context)
```

5.9.2.4 initState()

```
override void initState ()
```

5.18.2 Function Documentation

5.18.2.1 `getCourseTypeDisplayName()`

```
String getCourseTypeDisplayName (  
    String lang,  
    String name)
```

5.18.2.2 `getFormattedDate()`

```
String getFormattedDate (  
    DateTime date)
```

5.18.2.3 `getFormattedDateTime()`

```
String getFormattedDateTime (  
    DateTime date)
```

5.18.2.4 `getLectureFormDisplayName()`

```
String getLectureFormDisplayName (  
    String lang,  
    String name)
```

Pobiera nazwę wykładu do wyświetlenia w zależności od języka.

Parameters

<i>lang</i>	Kod języka (np. "pl" dla polskiego).
<i>name</i>	Nazwa wykładu.

Returns

Nazwa wykładu do wyświetlenia.

5.18.2.5 getLevelOfStudyDisplayName()

```
String getLevelOfStudyDisplayName (  
    String lang,  
    String name)
```

5.18.2.6 getObtainedTitleDisplayName()

```
String getObtainedTitleDisplayName (  
    String lang,  
    String name)
```

5.18.2.7 hasNetworkAccess()
